

Name(ID):

- Ayush Prajapati 201901099
- Shubham Patel 201901100

Time management software:

Theme:

time management software or task scheduler application

Epics:

- Work to do as a schedule
- Work done in schedule
- Automatic slot finding for scheduling

User stories:

- As a Role of regular user, I want Daily appointment schedule by email or message so that I can plan accordingly
- As a Role of task scheduler, I am able to store meeting information, venue of meeting and also time duration of the meeting/task.
- As a developer I am able to solve the problem of automatically open/free slots to schedule meetings.
- As a graphic designer I want the interface to be more reliable so that users can get a better experience.
- As a regular user I want a list of tasks/meetings which have been completed or any statistics related to the task/meeting so that I can organize what duration and how many hours were devoted to it.

Restaurant Automation System:

Theme:

Restaurant billing and product management application

Epics:

- Offline bill payment
- Online bill payment
- raw ingredients availability
- Product price management
- Sales statics generation
- Online food ordering

User stories:

- As a role of offline customer I want offline cash payment option so system should be able to efficiently manage cash payment
- As a role of customer I want online payment option too so that I can pay online if I don't have enough cash available
- As a roll of restaurant manager I want auto sales statistics generator so that I can able to optimize business strategies accordingly
- As a role of a restaurant manager I want option to see all the data of available raw ingredients so that I can able to pre- order them accordingly
