

Heuristic evaluation report

Shubham Patel - 201901100

Happetite website

Theme	Sub theme	Verbatims
Perception of the intervention	Navigation	The site opening and navigation is so smooth that everyone like and there is no lag or glitches.
	Experience	The slide presentation on home page and in every module is very good and the written content is very good that it attracts to read and it increase more interest. The features in slides like speaker notes, laser pointer, full screen mode, auto play etc. are very helpful.
Supporting factors	Graphics	The colours used on websites are light colours which everyone likes and they are calming and attractive.
	Content representation	Representation of written content in slides which is short and meaningful with animated you-tube video makes website more interesting. Use of google form in quizzes, assignments, activities etc. is best to get the user responses.
	Confirmation message	After completing quiz, assignment or any activity, we can submit it and it also shows confirmation message.
Improvements	Frontend layout	The problem is when I open this site in mobile phone, the layout of page is for mobile phone but the written content is going outside layout and we have to zoom out for it. After zoom out, whole layout is ruined.
	Bilingual	Site should have translation feature so those who don't understand English can translate it and understand the site content.
	Site stuck sometimes	Sometimes, when scrolling and comes to google form, it stuck at google form and stops scrolling in my laptop.
